

Name: _____ Date: _____ Period _____

Reaction Time (READ THE PROCEDURE)

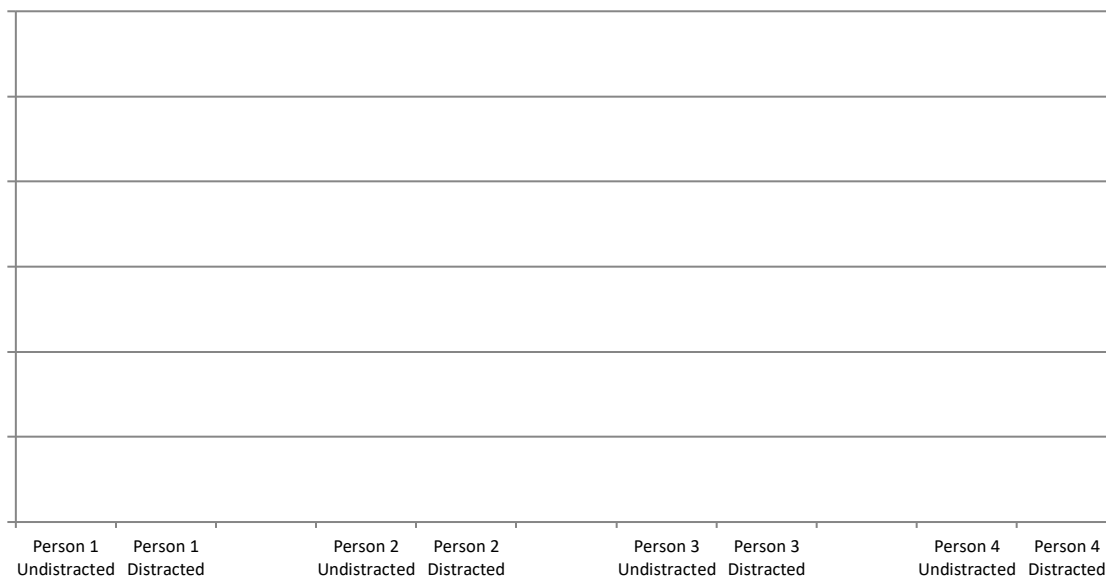

Procedure:

1. Form a group of no more than four.
2. Partner 1 holds the ruler.
3. Partner 2 positions their fingers so that they can catch the ruler by pinching their fingers together.
4. Partner 1 drops the ruler and Partner 2 catches it as quickly as they can.
5. Partner 2 records their data.
6. Repeat the experiment 3 times for each person. Repeat for each group member.
7. Repeat entire experiment again with a distraction.

Table 1: Record the distance the ruler fell before being pinched, then calculate the reaction time.

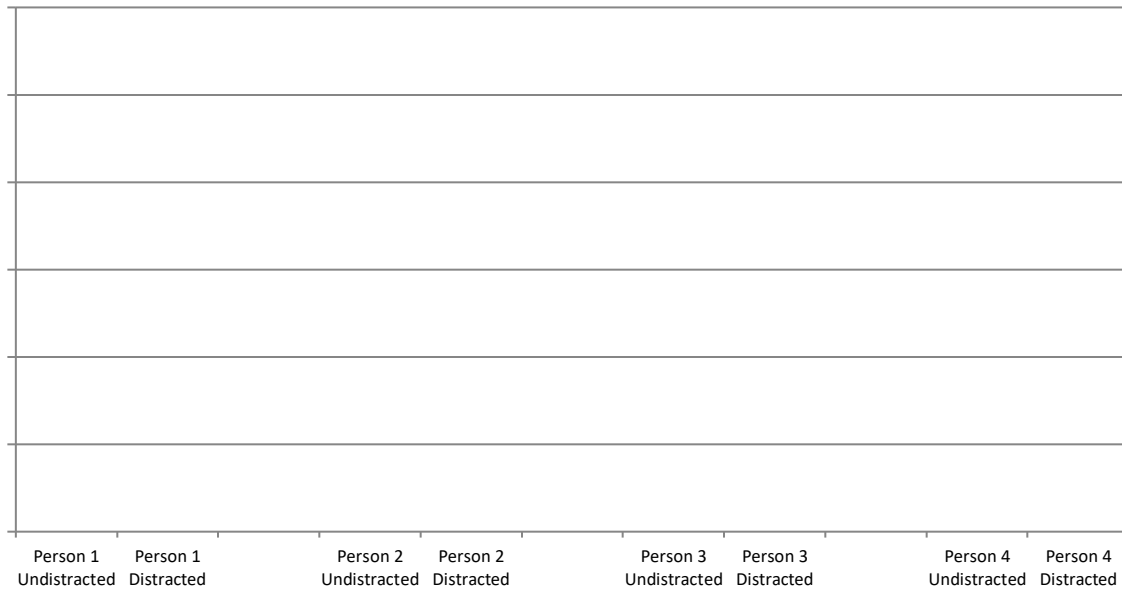

Data Table	Person 1 Undistracted	Person 2 Undistracted	Person 3 Undistracted	Person 4 Undistracted	Person 1 Distracted	Person 2 Distracted	Person 3 Distracted	Person 4 Distracted
Trial 1								
Trial 2								
Trial 3								
<u>Average Distance (add up and divide by 3)</u>								
Average Reaction Time. (use X_r formula)								

Average Drop Distance (Undistracted vs. Distracted)

Name: _____ Date: _____ Period _____

Reaction Time (Undistracted vs. Distracted)

Summarize the results of this experiment in the space below.... Who had the fastest reaction time? Who had the slowest? Was your distraction effective? How do you know?
